

The **Coleman** Catalytic Heater Wick

INSTRUCTION PROCEDURE FOR CHANGING WICK IN CATALYTIC HEATER MODELS 513A708 AND 515A704 ONLY.

CAUTION: Allow heater to cool before changing wick. Do not replace the wick while the heater is hot.

To remove old wick assembly

1.

Turn heater adjusting arm to the "Medium" setting.

2.

Open canopy. Leave the snuffer on the heater head.

3.

Remove the "retainer clip" which locks the heater head in place. If your heater does not have one, ignore this. The "retainer clip" is now considered unnecessary and new models do not have them.

4.

With downward pressure applied to the snuffer and heater head, rotate the head counterclockwise to disengage it from the fount. This operation will require two people. One to hold the fount in place while the other rotates the head.

5.

With a pair of pliers, rotate the wick in either direction until it disengages. Remove the old wick assembly from the heater head.

6.

Remove the old "O" ring from the fount top and discard.

REPLACEMENT WICKS FOR CATALYTIC HEATER MODELS 513A708 AND 515A704 ONLY.

CAUTION: Allow heater to cool before changing wick.
Do not replace the wick while the heater is hot.

To install new wick assembly

1.

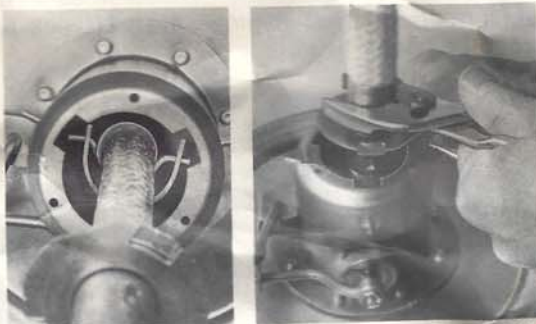

The new "O" ring found in the wick package should be inserted in the fount top.

2.

Check to insure that the "adjustment collar" is secure in the "yoke" located inside the fount opening. If "adjustment collar" has come out with the old wick replace it in position as indicated in the adjacent diagram.

3.

Run the new wick through the adjustment collar. With pliers, rotate the wick assembly until it snaps in place.

4.

Place heater head on the fount top. Be sure that the "adjustment arm" is lined up to match the adjustment decal on the canopy. With snuffer in place on the head, exert a downward pressure and rotate the head clockwise to snap in place.

5.

Close canopy. The heater is now ready to operate.
